The Rutgers Research Review (referred to as R$^3$) is a newly established online journal that seeks to publicize research performed by Rutgers undergraduates in all disciplines and to discuss the research experiences of students and professors within the community. The organization aims to accomplish this goal by publishing articles written by undergraduates that either focus on undergraduate research projects or reflections on the research experiences of Rutgers undergraduates, faculty, and alumni on the organization website.

The journal consists of the following three sections:

**Research**

Written by undergraduates working on an independent project. These articles discuss a project in a non-technical manner. Calls are usually sent out once a semester for these papers to the undergraduate student body. Subsections include Applied Sciences, Formal Sciences, Humanities, Mathematical Sciences, Natural Sciences, and Social Sciences.

**Reflections**

1. Interviews with faculty and star students about their research and opinions on different matters.
2. Written by any Rutgers student conducting research or Rutgers alumna/alumnus who used to or currently conducts research. These articles will center on personal experiences with research, whether in a Rutgers laboratory, an outside laboratory, or industry.

**Topics**

Written by any Rutgers student (do not need to be conducting research). These articles introduce the reader to an emerging topic within a field and discuss it in a concise manner. The writer should simply be passionate about the discussed topic.
